

Deeper learning is within your grasp

Bridge physical objects and digital learning with the **Tool Explorer™** platform, only on the SMART Board® 6000S interactive display

Available exclusively on the SMART Board 6000S series, the new, patent-pending Tool Explorer platform lets teachers and students manipulate real world objects to interact intuitively with digital content, increasing engagement and knowledge retention.

Stamps and Cubes take student engagement with lesson content to the next level. Just pick it up a tool, place it on the SMART Board, and interact. The built-in whiteboard recognizes the tools and reflects them digitally, supporting even more teaching and learning styles.

Multi-colored pens and instructional tools make teaching more natural and learning more memorable. Write, highlight content, and draw student attention in any file type or application without tool selection or mode switching.

Only SMART Board 6000S with Tool Explorer can:

- Recognize a **virtually unlimited number of tools and manipulatives**. The possibilities are limitless.
- Sense **up to 20 tools simultaneously**, so multiple students can work together without interfering with one another's input.
- **Accurately recognizes tool sets of pens, objects, and manipulatives**. The entire display area is "tool aware". No selecting options or manually picking tool types, and no training is needed.

Why it matters in the classroom

Tool Explorer combines the learning benefits of manipulatives with the flexibility and scalability of digital materials, increasing engagement and knowledge retention.

- Kinesthetic and tactile learners get the movement, hands-on activity and fine motor experiences they need to explore, learn and retain.
- Students can collaborate more meaningfully with different objects simultaneously, without being constrained by the input or tool choice of their peers.
- More easily differentiate learning, using tool sets for different subjects, learning needs and abilities, providing multiple pathways through lessons.

Available now for SMART Board 6000S series

Pens & Instructional Tools

- Multi-color, 4-pen pack with magnetic pen well
 - Blue, green, purple and orange
 - Magnetically mount pen wells at any height, on both sides of the 6000S series
- Highlighter - dual color yellow and green
- Magic Pen - create spotlights, magnifier & disappearing ink

Cubes & Stamps

- Play Bundle Stamps: heart, star, player 1 and player 2. Magnetically dock stamps to 6000S tool tray
- Math Cubes – numbers x2, fractions and operators
- Early Learning Cubes – shapes, counters, vowels and emojis
